Title: Live
Who: Group 105-4
 Colton O'Connor
 Ryan Jones
 Haifeng Jiang
 Reid Pritchard
 Cade Gorman
Project Description:

An interactive event scheduler that searches through countless venues around the customers area to provide them with the perfect event to attend on their night off. This will work by organizing local events into categories, ranging from music, comedy, political, art events, and more. The user will be able to create their own unique account that will keep track of their interests and events, organizing them into a calendar. We will allow more customization for the user to filter out events or artists they dislike, so they no longer have to pour through different websites, searching for what to do. We hope to open up our customers to more activities happening in their area, and allow them to communicate with others who share their interest.

On top of this idea, we would like to create a forum for people to discuss the events through comment sections. This will allow the customer to create a profile where they can then have discussions with similar fans attending. Having customers have their own account will also allow for tracking of what the customer likes and interests so new events can be suggested to them. We can also plot out expected attendance for events based on the number of users interested.

The main focus, however, is to give the user awareness of live events that they may want to attend. We want a database that is visually appealing and easy to navigate so users can attend their favorite events

Project Tracker:
We used a Gantt Chart to track progress on our project. The chart is below

TASK	ASSIGNED TO	PROGRESS	START	END
Event Listing				
Access events from venues websites	Colton	15%	2/17/20	2/27/20
Store/organize Data	Ryan	0%	2/27/20	3/3/20
Catagorize events by genre	Haifeng	0%	3/3/20	3/7/20
Search by genre	Reid	0%	3/7/20	3/12/20
Look over others code	Cade	0%	2/18/20	3/12/20
Unique Accounts				
Account Data Storage	Colton	0%	2/18/20	2/22/20
Password Encriptions	Ryan	0%	2/20/20	2/25/20
Look over others code	Haifeng	0%	2/18/20	2/25/20
Change Password	Reid	0%	2/18/20	2/20/20
Preferences	Cade	0%	2/18/20	2/21/20
Event Suggestion				
User Prefences Data storage	Colton	0%	3/3/20	3/8/20
Look over others code	Ryan	0%	3/9/20	3/13/20
Relating interest to event	Haifeng	0%	3/14/20	3/19/20
Pulling events based off category	Reid	0%	3/20/20	3/24/20
Task 5	Cade	0%	3/14/20	3/18/20
Communication Between Users				
Look over others code	Colton	0%	3/24/20	4/8/20
Creating distinct users	Ryan	0%	3/24/20	4/1/20
GUI for user	Haifeng	0%	3/27/20	4/5/20
Storage for user data	Reid	0%	3/30/20	4/8/20
Tracking Users interest	Cade	0%	4/1/20	4/6/20
Notifications				
General Notification Work	Reid	0%	3/25/20	4/15/20
Event Search				
General Event search work	Ryan	0%	3/30/20	4/20/20
Milestones				
Milestone 1	All	100%	N/A	N/A
Milestone 2	All	100%	N/A	2/17/20
Milestone 3	All	0%	2/17/20	3/13/20
Milestone 4	All	0%	3/13/20	3/20/20
Milestone 5	All	0%	3/20/20	4/6/20
Milestone 6	All	0%	4/6/20	4/27/20
Milestone 7	All	0%	4/27/20	5/4/20
Milestone 8	All	0%	5/4/20	5/4/20

Along with this chart, we set up a slack page for communication and progress tracking. A screen shot is below.
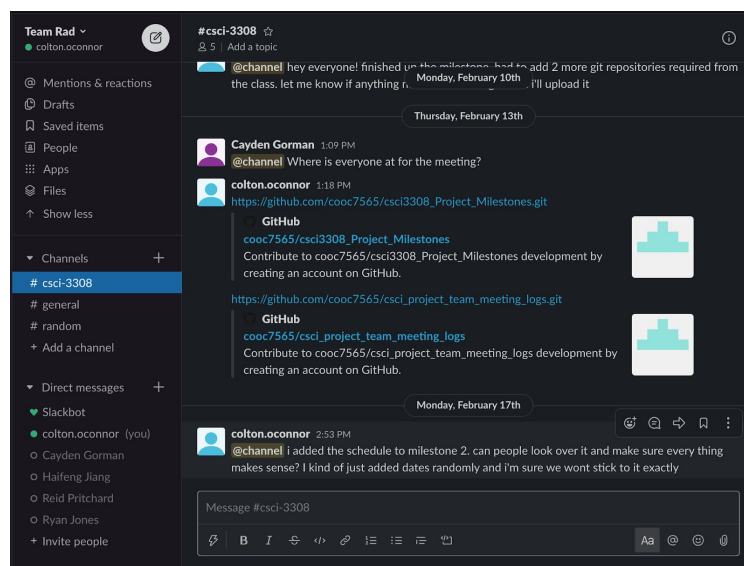

All information and documentation can be found in this link to a google drive folder:

Milestone repository: https://github.com/cooc7565/csci3308_Project_Milestones

Contributions:

Colton O'Connor- Worked on paperwork and milestone submission. Set up a gantt chart and slack channel for communication. Created the user profile page and worked on connection between html and .ejs pages. Created multiple sample event pages. General work on links between pages.

Ryan Jones- Created most of the front end and .ejs files. Linked the database to the landing page. Created landing page and scripts to populate the data. Created .css files and overall aesthetic of the front end.

Haifeng Jiang- Worked on general maintenance of the project, helping others on the larger parts of the project.

Reid Pritchard- Created app.js and general local hosting of the software. Major contributions on the backend of the project. Set up all the node.js code. Worked on connection back end and front end of the software. Created the layout of the event page.

Cade Gorman- Backend database setup. Creation of db_builder.sql. Created User Preference page. Other general backend support on the project.

Development:

This project is operating in a local environment, so as of now the user has to host the site locally to operate. A description on how to run the project is below.

How to run software:

Since our software is ran locally, to see it in operation, you must follow the following steps:

1. Create a new DB using PostgreSQL called site_db, using port 5432
2. In the repository, use the file "db_builder.sql" to populate the database
3. In terminal, navigate to the director "Site"
4. Once in the Site, and after the database has been set up, run the command "node app.js"
5. In your browser type localhost:3000/
6. You will now be running the site
